

end having means (31) for deforming an end face of the fastening member to provide an area of purchase thereon; and means (44) to cause rotation of the fastening member to unscrew the fastening member from the structure, the tool being characterized in that a mandrel (38) is provided which is spring mounted within the body member and arranged to engage with the end face of the fastening member for locating the first end of the body member with respect to the end face of the fastening member. b1

28. (New) A tool according to claim 27, wherein said means to cause rotation comprises attachment means for the attachment of an operating member (44) and wherein the attachment means is located at the second end of the body member (30). }

29. (New) A tool according to claim 28, wherein the attachment means of the operating member comprises an impact means (44) for both imparting a blow to the tool and providing the means for rotation. ^

30. (New) A tool according to claim 27, wherein the means for deforming the fastening member comprises at least one cutting means (31') for biting into said end face. b1 7

31. (New) A tool according to claim 30, wherein the cutting means includes at least one angled cutting edge. 8

32. (New) A tool according to claim 30, wherein the cutting means comprises a blade ring (31) having blades arranged around an aperture formed in the blade ring. 9

33. (New) A tool according to claim 27, wherein the first end of the body member is provided with an aperture running longitudinally through the center of the body member. 13

34. (New) A tool according to claim 33, wherein the aperture enables a bolt or similar object, on which is threaded a fastening member, to be lowered into the body member such that the blades (14, 31) come into contact with an end face of said fastening member. 15

35. (New) A tool according to claim 27, wherein the leading end of the mandrel (38) is tapered. 1^c

36. (New) A tool according to claim 27, wherein the tool is provided with means (43) for preventing peripheral damage to the structure. 2¹

37. (New) A tool according to claim 36 wherein a cover or shroud (43) is provided to surround the means for deforming the end face of the fastening member.
